# Kongsberg EK80

Software Release Note 23.6.2

KONGSBERG

---

## Introduction

This document describes the changes introduced with the new software version.

- **Product:** EK80
- **Software version:** 23.6.2
- **Upgrade from version:** 23.6

This software controls all functionality in the EK80 system. This includes transmission and reception, interfaces with external peripherals and sensors, and all user interface.

## Do I need to upgrade?

This is a smaller update on the software. For details on the latest upgrade of functionality please, use release note for software version 23.6.

Updating is relevant for all customers using the VLW datagram from RAW files, for instance when using **EchoView**.

## Software changes

This software update solves a software bug related to RAW data storage. The following specific changes have been made.

### Bug fixes

- The NME0 VLW datagram holding sailed distance, are reintroduced at regular intervals (0.005 nmi) through out the RAW data files.

## Contact support

If there are any questions or issues related to the EK80 product, upgrade, user interface, performance etc, do not hesitate to contact our support team.
